we need some members of the general public on this committee to bring in common sense. i cannot approve of this committee just with members of certain specific industry profiteers - this skews any policy in favor of the specific industry and its profits and forgets about the interests of the general public. the general public needs 50% of all seats. the general public has a right to have input on these projects.

no standard rabbit abusive test should be used anymore. it should be discontinued. it is nothing but abuse and horror for the rabbit and for every person with a heart and brain to understand pain.

epa should not be consorting and collaborating with special interest profiteers and leaving out the public. this is certainly not democracy. it is secret and it is abusive and undemocratic.

i do not at all like that business profiteers are the only members of ATWG chlorox, colgate, dial, ecolabo, johnson, etc.

the general public is getting sick of the tangents and horrors this insular committee consorting with financial profiteers and making connections that do not help the general public, who pays the salaries of employees of this agency. the public should be the primary beneficiaries, not financial profiteers.

the nih is managed offensively to american public.
